1. Summary

The work our group undertook for the recently had been mostly aimed at getting a working prototype up and running. We focused on getting most of the main pages running and functioning in the correct manner.

We had made changes to our databases submitted in deliverable 1 and implemented that into our second deliverable. We added a Tags, Task_Tags, Task_status, banned_users and flagged_tasks tables while removing the reputation, claims and File_paths table finding that they did not serve a necessary purpose or could be implemented in a different table.

We have tried to give out website as much functionality as possible for our prototype and believe we can meet all requirements in due time.
